CONTENTS

{**INTRODUCTION**}

I. The main objective of our project is to show connectivity between PHP and MYSQL by using wamp server.

II. For showing the connectivity we make a small project "wine store" in which we basically make a homepage by using html in notepad++.

III. After that we connect that homepage with our connectivity file through 'POST' method which we learnt throughout the year.

IV. Once the connectivity file is ready, then we create database by using phpadminer, after that create the table according to our project requirement.

V. By inserting the values in the table, we run our project in localhost and get the output
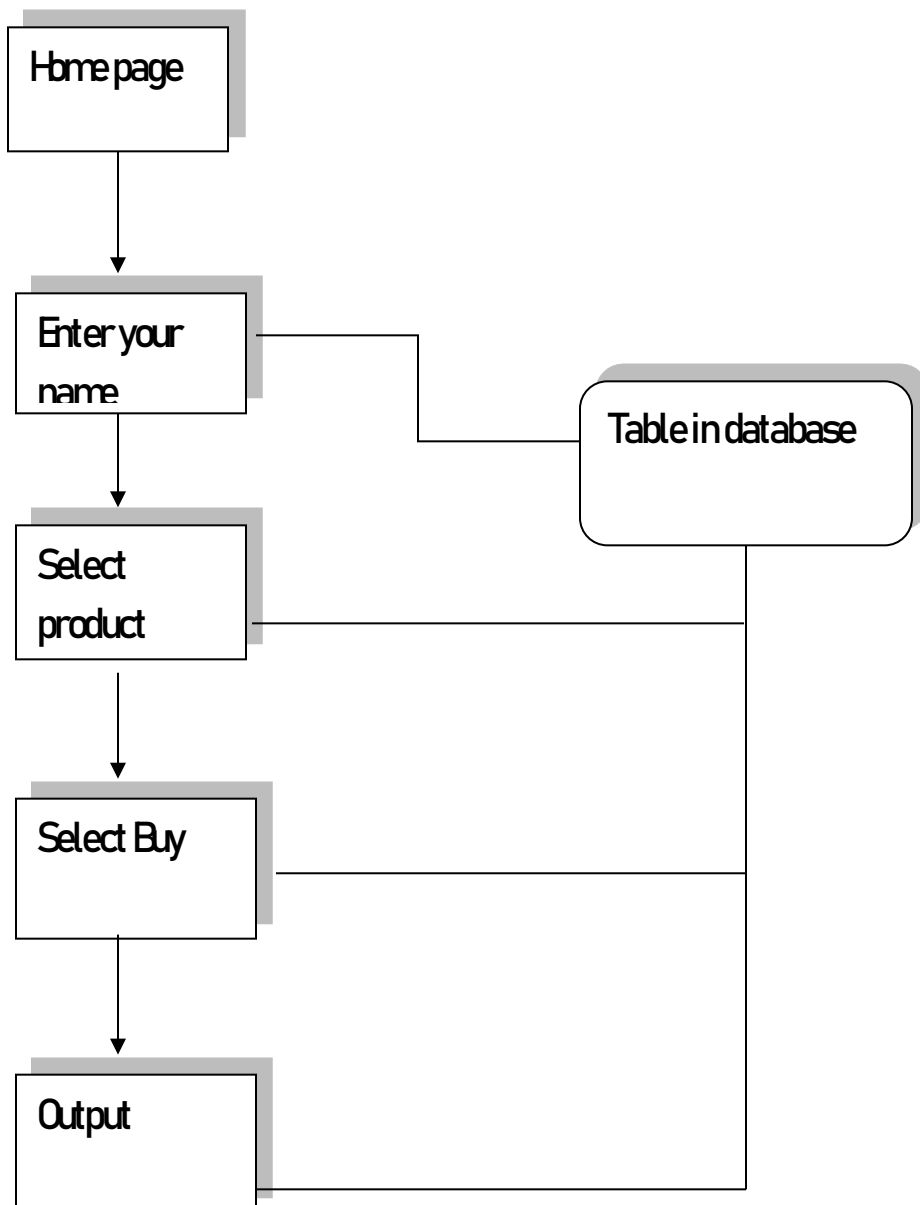

Need the Project:

1. Our basic need to show the connectivity between php and mysql.

2. On the other side we made 'wine store' for general use and it helps in digital working, if people want.

3. It also goes for online liquor directly through the shop.
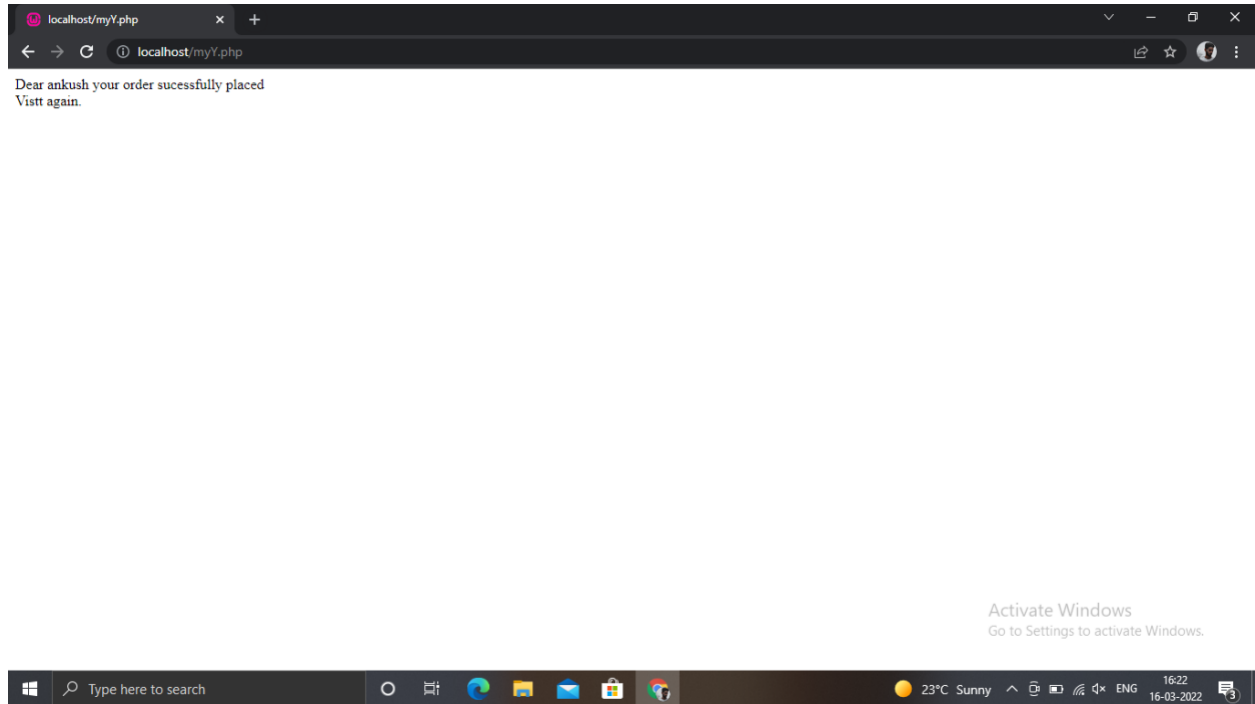

Software and Technology

1. Using XAMP server

2. Languages used: html, php, MySQL

- **HTML-** Hyper Text Markup Language
- **PHP-** Hypertext Preprocessor
- **MySQL-** My Structured Query Language

3. Edited in notepad++

Dear ankush your order sucessfully placed
Vistt again.

Conclusion:

An assessment towards the end of the project should result in two conclusion , one on the product that is what the project achieved against the objective set at the start of the project , and second on the process that is how the outcome of the project was achieved with an indication of the lessons to be learned from team work and from our sir…
